Professional Summary

Senior Flutter Developer with **5+ years of experience** and **18+ applications** shipped across e-commerce, healthcare, and service domains. Owns the shared architecture, automated quality checks, and AI engineering workflow the team's apps are built on — and still ships the features, payments, and booking flows that customers use.

Work Experience

Senior Flutter Developer | Excellent Protection (Jan 2023 – Present)

- **Designed the shared architecture two apps now run on** — the navigation, network, and state code lives in one versioned package instead of being copied into each app, so one fix reaches every app through a reviewed upgrade.
- **Extended it into an internal developer toolchain** — **11 automated code-quality checks enforced before every commit**, plus a checker that verifies what the app expects from the API against what the backend actually returns.
- **Built a Figma-to-code design pipeline** — colours, spacing, typography and icons are regenerated from the design file, so a design change reaches the app as generated code instead of values re-typed by hand and drifting.
- **Architected and implemented CI/CD pipelines** (GitHub Actions, Azure Pipelines, Fastlane, Firebase App Distribution), accelerating release cycles by **15%**, with reusable build templates on an in-house Mac build machine serving every app.
- **Introduced automated testing** across the app and shared packages — unit, widget, and cubit-state tests plus mock repositories, so each switch from test data to the live API, and each shared-package release, is verified before it ships rather than after.
- **Created the team's AI engineering workflow** — reusable AI skills, agent definitions, and a plan-review-execute process, with the same automated checks holding every change, agent-written included, to the architecture rules.
- **Established coding standards and code-review discipline** — blocking defects separated from suggestions on every pull request, and the repetitive checks automated so review time goes to logic and edge cases; post-release bugs down **30%**.
- **Mentored 2 junior developers**, improving team-wide code quality and best practices.
- **Shipped customer-facing features** across the company's booking and services apps — hourly and package-based booking, order tracking, payments, and a loyalty programme — including a payment-gateway migration that replaced three duplicated card-payment flows with one.

Senior Flutter Developer (Part-time Contract) | Meta Shops Ksa (Jan 2025 – May 2025)

- **Built and deployed 3+ Flutter apps for clients**, gathering their requirements and turning them into features.
- **Refactored a legacy codebase** using Clean Architecture, improving maintainability.
- **Engineered and delivered** a key **geo-fenced student attendance feature**, allowing check-in/out only within school premises.

Mid-level Flutter Developer | Excellent Protection (Mar 2022 – Dec 2022)

- **Developed and launched over 8** of the company's **11+ mobile applications**.
- Translated Figma prototypes into **responsive, high-performance UIs**.
- Collaborated with backend teams to design and integrate **RESTful APIs**.

Flutter Developer | Freelance (Remote) (Mar 2020 – Sep 2020)

- **Managed end-to-end development** for 6+ client apps with **95% on-time delivery**.
- **Architected apps from scratch** using modern state management (Bloc/Provider).

Projects

Shared Flutter Architecture & Internal Toolchain (Private)

Packaged the shared infrastructure as a versioned release — a core package, a copy-in scaffold each app owns, and automated checks that enforce the rules at commit time instead of in review.

Awon (Flutter Application)

Architected the booking engine — hourly and package-based services, with HyperPay integration.

Android: <https://play.google.com/store/apps/details?id=com.excprotection.ircmobile>

iOS: <https://apps.apple.com/us/app/awon/id1483782795>

HyperPay (Flutter Plugin)

Published a Flutter plugin on Pub.dev — bridges the native iOS and Android HyperPay SDKs.

Pub.dev: https://pub.dev/packages/hyperpay_plugin

Driver Package (White-Label SDK)

Engineered a reusable driver package — cut delivery time and enabled real-time fleet tracking.

Android: https://play.google.com/store/apps/details?id=com.excprotection.sracco_drivers

Android: https://play.google.com/store/apps/details?id=com.excprotection.irc_drivers

Additional Projects

Rafah (Flutter Application)

A household services app for booking cleaning and laundry through scheduled visits.

Android: <https://play.google.com/store/apps/details?id=com.hrbs.rafahapp>

iOS: <https://apps.apple.com/us/app/rafah/id6476551030>

Es3fni (Flutter Application)

An on-demand healthcare platform for coordinating and scheduling home-care services like nursing and physiotherapy.

GitHub: <https://github.com/ayman-elslamony/Es3fni>

Check And Chat (Flutter Application)

A location-based social e-commerce application with user ratings and community features.

GitHub: <https://github.com/ayman-elslamony/checkAndChat>

Network Inspector & Runtime Config Editor (Private)

A QA-facing debugging package: separates backend from frontend failures, exports cURL and session bundles into bug reports, and switches base URL, tenant, and payment mode at runtime.

Education

Bachelor's Degree in Computer Science (BCS)

Suez Canal University (Sep 2016 – Jul 2020)

Training & Internships

Flutter Mobile Development Internship

Information Technology Institute (Jul 2019 – Sep 2019)

Courses

Clean Architecture in Flutter 3 — Udemy, Jun 2022. Ongoing self-directed study in iOS & Swift and modern Flutter/Dart practice (2020–2026).

Technical Skills

- **Mobile Development:** Flutter (Android, iOS), State Management (Provider, Bloc, GetX, Riverpod), Navigation & Deep Linking (go_router), Dependency Injection (get_it), Code Generation
- **Architecture & Practices:** Clean Architecture, SOLID, Design Patterns, Architecture Patterns (MVVM, MVC), Feature-First Modularization, Architecture Decision Records (ADR), Refactoring & Legacy Modernization, Technical Documentation, Code Review, Performance Optimization, Monorepo (Melos), Clean Code, SDLC, Agile, Scrum
- **Testing:** Unit Testing, Widget Testing, Cubit/Bloc State Testing, Regression Testing, Mock Repositories
- **APIs & Integrations:** RESTful APIs, Offline Storage & Caching (Sqlite, Shared Preferences), Location & Mapping (Google Maps, Geofencing, Real-time Tracking), Firebase (Analytics, Firestore, Remote Config), Push Notifications (FCM, OneSignal), Agora, User Analytics
- **Payments:** HyperPay (Plugin Author), Paymob, Tabby, Payment Gateway Integration
- **Security:** Biometric Authentication (FIDO2-style), Secure Key & Token Storage, Session and Token-Refresh Handling
- **CI/CD & Release:** Continuous Integration / Continuous Delivery (CI/CD), GitHub Actions, Azure Pipelines, Fastlane, Firebase App Distribution, App Store & Google Play Deployment
- **Design Systems:** Design Tokens, Theming (Light & Dark), Responsive Scaling, Figma-to-Code Pipeline
- **AI-Assisted Engineering:** Authored AI skills, agent definitions, and delivery workflows, verified by automated checks before commit; Claude Code, Cursor, ChatGPT, Gemini
- **Programming Languages:** Dart, Swift, Python
- **IDEs & Tools:** Android Studio, VS Code, Xcode, Postman, Git (GitHub, GitLab), Azure DevOps, Notion, Sentry & Firebase Crashlytics

Languages

- **Arabic** (Native)
- **English** (Proficient)
